

Collaborative Stage Data Collection System (CSv2 0203) Reporting Requirement

Centers for Disease Control and Prevention, National Program of Cancer Registries (CDC-NPCR)

CDC-NPCR requires the use of Version 02.03 of the Collaborative Stage Data Collection System (CSv2 0203) effective January 1, 2011. CDC-NPCR requires the collection of CSv2 data items needed to derive SEER Summary Stage, SSFs for Breast, Brain/CNS/Intracranial, and SSF 25 for applicable sites (schema discriminators). CDC-NPCR requires, as available, the collection of CSv2 data items needed to derive AJCC-7 TNM Stage. CDC strongly encourages NPCR registries to collect additional CSv2 data items.

2011+ Required As Available Input Items:

Item	Item Name	Site(s)
1182	Lymph-Vascular Invasion	Penis, Testis
2840	CS Regional Nodes Eval	All
2860	CS Mets Eval	All
3400- 3430	Derived AJCC-7 TNM and Descriptors	All

2011+ Site Specific Factors for selected primary sites (not required to derive Summary Stage) but required by CDC-NPCR:

SSF 1 Brain, CNSOther, Intracranial Gland (WHO Grade Classification)

SSF15 Breast – HER2 Summary Result of Testing

SSF16 Breast – HER2 Combination of ER, PR, and HER2

2011+ Site Specific Factors (for selected primary sites) required as available to derive AJCC-7 TNM Stage (Please note that SSFs needed to derive Summary Stage are Required):

Schema	SSFs
Appendix	2, 11
BileDuctsDistal	25 (required for Summary Stage 2000)
BilDuctsIntraHepat	10
BileDuctsPerihilar	25 (required for Summary Stage 2000)

Bladder	2
Breast	3, 4, 5, 8, 9, 10, 11, 12, 13, 14
