

CSv0204 Support for Known Issues

This report summarizes changes that will be made in v0205. Coding guidance for use with v0204 is provided where appropriate.

Coding Instructions and/or Schema Name(s)	CS Field(s)	Description and Date Added	Reference # Admin Use Only
Part I Section 1		Appendix 4 needs the new allowable T values from the thyroid schema using the (s) or (m) for single or multiple tumors added. 7/2/12	625
Brain, CNSOther, IntracranialGland	CS Site-Specific Factor 1	The AJCC 7th edition table referenced in Note 2 should be 56.3. 7/2/12	661
BuccalMucosa, EpiglottisAnterior, GumLower, GumOther, GumUpper, Hypopharynx, LarynxGlottic, LarynxOther, LarynxSubglottic, LarynxSupraglottic, LipLower, LipOther, LipUpper, Nasopharynx, Oropharynx, PalateHard, PalateSoft, ParotidGland, PharyngealTonsil, SubmandibularGland, TongueBase	Extra Table	Multiple Head and Neck Schemas, SSF 1, Size of Lymph Nodes, Code 988 mapping has been updated to ERROR. Code 988 is defined as NA, but SSF 1 is required for staging. Any cases currently coded with 988 in SSF 1 may no longer derive an N value after conversion to v0205. Review and recoding of head and neck cases with SSF 1 code 988 ahead of conversion would avoid possible stage derivation problems at that time. 8/8/12	679
Esophagus	CS Lymph Nodes	A combination of nodes in codes 305+275 was included in both 320 and 330. In CSv2.05, code 330 will be changed to include 270 instead of 275. In CSv2.04 use 320 for the combination 305+(265 or 275), and use 330 for the combination 305+(270 or 280). Using 305, 320 or 330 results in the same derived values, so it is not necessary to review and recode any cases that have already been completed. 7/2/12	616
Lung	Extra Table	An error was found affecting cases collected under CSv1 with CS Extension where code 250 was converted to 680 in CSv02.04. This error occurs for Summary Stage 2000 when SSF 1 is 988. For cases coded in CSv1, SSF 1 is 988 if the case has not been updated to CSv2 codes. Two options for cases deriving an ERROR: 1. Leave the case with the derived stage as ERROR. This will automatically be corrected with the next release of CS in 2014. 2. Change SSF 1 to 999. You will also need to change SSF 2 to 999 if you report to CoC or SEER. NPCR registries can retain 988 for SSF 2. 11/5/12	671
Prostate	CS Extension	CS Extension Notes 3A,3B,3C and code descriptions for CS Extension codes 100-240 will be clarified to indicate that only physical exam is used in determining an inapparent tumor versus apparent tumor unless the managing clinician/urologist considers the imaging reliable for staging. 10/15/12	685
